Client Admin Master PRD

> ⚠️ **V1 SCOPE LOCKED — March 20, 2026**
> All V1/V2 decisions below are locked and reflected in CLAUDE.md v5.0.
> Do not modify V1 scope without updating CLAUDE.md first.

Document Type: Master PRD (Features In / Features Out / Data Model / User Stories)

Author: Sandesh Banakar I

Status: IN PROGRESS — V1 scope locked March 20, 2026

Last Updated: March 20, 2026

Product Name: keySkillset Client Admin Platform

Depends On: Super Admin PRD v1.1 (Tenant, RBAC & Licensing — Sub-PRD 2)

V1 / V2 Split Decision Table (locked March 20, 2026)

Feature	V1	V2
Org Hierarchy — Departments + Teams CRUD	✅	
Org Hierarchy — Groups		✅
Learner Management — Manual Add + CSV	✅	
Learner Management — Hard Delete (GDPR)		✅
Content Assignment — Dept / Team / Individual (dynamic)	✅	
Content Assignment — Groups as target		✅
Learning Paths (sequential unlock, certificates per path)		✅

Individual course completion certificate	✅ (courses only)	Assessment certs
Reports R3 (Per-Learner Score)	✅	
Reports R5 (Content Item Performance)	✅	
Reports R6 (Certificates Issued Log)	✅	
Reports R7 (Learner Activity Log)	✅	
Reports R1 (Tenant Overview Dashboard)		✅
Reports R2 (Department Completion Rates)		✅
Reports R4 (Overdue Learners)		✅
Team Manager role + scoped access		✅
CA Content Bank (FULL_CREATOR — make LIVE / archive)	✅	
Push tenant content to SA global bank		✅
Content Creator interface /content-creator/[tenant]/		✅ (Future Scope)
Learner-facing certificate download		✅
Notifications + Audit Trail	Audit log only (V1)	Full notifications (V2)
SSO / SAML		✅

Learner self-registration via invite link		✅

Document Map

#	Sub-PRD	Scope	V1 Status
Sub-PRD 1	Org Hierarchy & RBAC	Department → Team structure. **Groups + Team Manager → V2.**	IN SCOPE (Dept + Teams only)
Sub-PRD 2	Learner Management	Manual add, CSV bulk upload, deactivate/reactivate. **Hard delete → V2.**	IN SCOPE
Sub-PRD 3	Content Assignment & Learning Paths	Content assignment (Dept/Team/Individual). **Learning Paths → V2.** Course completion certificates V1 only.	PARTIAL (assignment only)
Sub-PRD 4	Reporting & Analytics	R3, R5, R6, R7 only. **R1, R2, R4 → V2.**	PARTIAL (4 reports)
Sub-PRD 5	Notifications & Audit Trail	Audit log only in V1. Notification emails → V2.	PARTIAL

---

1. One Pager

Problem Statement

keySkillset's B2B clients — coaching centres and corporate training teams — have no dedicated administrative layer that:

- Organises learners into meaningful hierarchies (departments, batches, teams) that mirror how coaching centres and companies actually operate

- Allows bulk learner onboarding (coaching centres onboard 50–500 students per intake)
- Makes licensed content accessible to enrolled learners without Super Admin intervention
- Tracks per-learner progress against assessments
- Enforces strict data isolation so Client Admins never see other tenants' data

Strategic Objectives

1. **Org self-service first:** Give B2B clients the tools to onboard, organise, and manage their learners without raising a support ticket.
2. **Coaching centre parity:** Match the batch/cohort management experience Indian coaching centres expect.
3. **Content delivery:** Ensure learners can access the content their org has licensed, with clear assignment tracking.
4. **Platform credibility:** Reach V1 feature parity sufficient for first B2B client onboarding.

Constraints

- Client Admin operates **within a single tenant only** — all DB queries are tenancy-scoped.
- Content assignment is from SA-licensed global catalog (RUN_ONLY) + own tenant's LIVE content (FULL_CREATOR).
- Team Manager role: V2. All admin functions in V1 = CLIENT_ADMIN only.
- Learning paths, sequential unlock, path-level certificates: V2.
- Learner-facing experience (certificate download, learner dashboard): V2.
- SSO: V2.
- Branding per tenant: V2.

Personas (V1)

Persona	Description	V1 Role
Client Admin	B2B coaching centre manager or corporate L&D owner	Full org management within tenant
B2B Learner	Enrolled in coaching centre or corporate org	Access assigned content (learner-facing V2)
Super Admin	keySkillset internal operator	Creates tenant, assigns plans, manages CA
Content Creator (FULL_CREATOR)	Tenant-scoped content creator	Creates tenant-private content. Interface = Future

		Scope.

Team Manager: V2. Not in V1 code, not in V1 UI, not in role selectors.

---

2. Tenant Architecture Context

Layer	Owner	CA Interaction
Platform config, content bank, plans	Super Admin	Read-only: sees licensed catalog via assigned B2B plans
Tenant config, licensed categories, seat count	Super Admin	Read-only
Org hierarchy, learners	**Client Admin**	Full control within tenant
Content assignment to learners	**Client Admin**	Full control
Reports (R3, R5, R6, R7)	**Client Admin**	Tenant-scoped
Content creation	Content Creator (FULL_CREATOR only)	Tenant-private content → CA promotes INACTIVE → LIVE

Content model (V1 locked):

- `content_items.visibility_scope = 'GLOBAL'` → SA content, accessible via B2B plan assignment
- `content_items.visibility_scope = 'TENANT_PRIVATE'` → tenant-authored content (FULL_CREATOR only)
- CA Catalog: FULL_CREATOR sees GLOBAL (from assigned plans) + own TENANT_PRIVATE LIVE content
- CA Catalog: RUN_ONLY sees GLOBAL (from assigned plans) only

---

3. Features In (V1)

Feature 1: Org Hierarchy (Departments → Teams)

V1 scope: Department CRUD + archive. Team CRUD + archive within department. Learner assignment to dept/team.

V2 deferred: Groups (cross-cutting layer), Team Manager assignment, Group-based content assignment.

Feature 2: Learner Management

V1 scope: Manual add, CSV bulk upload (validate + partial import), learner list, learner profile, deactivate/reactivate, password reset by CA.

V2 deferred: Hard delete (GDPR), self-registration, SSO, learner impersonation.

Feature 3: Content Assignment

V1 scope: Browse licensed catalog, assign to DEPARTMENT | TEAM | INDIVIDUAL. Dynamic membership (future learners inherit access). Unassign.

V2 deferred: Groups as assignment target, content preview, scheduled availability.

Feature 4: Learning Paths

V2 — ENTIRELY DEFERRED. No learning_paths, steps, enrollments, or step_progress in V1.

Feature 5: Individual Course Completion Certificate (V1 — replaces path certificate)

V1 scope: Certificate issued when learner completes a course (100% screens viewed). CA sees certificates in R6 report.

V2: Assessment completion certificates, learning path certificates, learner-facing download.

Feature 6: Reporting

V1 scope (4 reports):

- R3: Per-Learner Score & Attempts
- R5: Content Item Performance
- R6: Certificates Issued Log
- R7: Learner Activity Log

V2 deferred: R1 (Overview Dashboard), R2 (Department Completion), R4 (Overdue Learners).

Feature 7: CA Content Bank (FULL_CREATOR only)

V1 scope: CA sees INACTIVE tenant content. CA can Make Live (status → LIVE, visibility_scope = TENANT_PRIVATE). CA can Archive. LIVE content appears in CA Catalog immediately.

V2 deferred: Push to SA global bank (PENDING_PROMOTION workflow).

Feature 8: Audit Trail

V1 scope: client_audit_log table captures all state-changing CA actions. Viewable in Settings → Audit Log (placeholder).

V2 deferred: Full notification events, email on audit events.

---

4. Features Out (V1)

Feature	Reason	Target
Team Manager	Schema constraint (TEAM_MANAGER role deferred, no code in V1)	V2
Groups	Complexity; Dept/Team sufficient for V1	V2
Learning Paths	Complex unlock engine + state machine	V2
Hard delete (GDPR)	Legal + data retention policy must be defined	V2
Assessment completion certificates	V1: course completion only	V2
Learner-facing experience	Out of scope for demo spec	V2
SSO (SAML/OIDC)	Architectural complexity	V2
Learner self-registration	V1 = manual + CSV only	V2
Push tenant content to SA bank	Complex SA review workflow	V2
Content Creator interface	Future Scope (not scoped)	Future
R1, R2, R4 reports	Depend on learning paths	V2
Scheduled/custom reports	Background job complexity	V2
Branding per tenant	Super Admin controls in V1	V2

---

5. Full Data Model

5.1 Existing Tables (used by CA)

learners — id, tenant_id, full_name, email, phone, department_id (FK→departments), team_id (FK→teams), status (ACTIVE|INACTIVE), created_at

admin_users — id, tenant_id, name, email, role (CLIENT_ADMIN|CONTENT_CREATOR|SUPER_ADMIN), is_active

departments — id, tenant_id, name, status (ACTIVE|ARCHIVED), created_at

teams — id, department_id, tenant_id, name, status (ACTIVE|ARCHIVED), created_at

content_items — includes visibility_scope (GLOBAL|TENANT_PRIVATE|PENDING_PROMOTION) added in KSS-DB-CA-001

5.2 New Tables (KSS-DB-CA-001)

learner_profiles — id, learner_id (FK), tenant_id (FK), employee_roll_number (nullable), notes (nullable), UNIQUE(learner_id, tenant_id)

content_assignments — id, tenant_id, content_id, content_type (ASSESSMENT|COURSE), target_type (DEPARTMENT|TEAM|INDIVIDUAL), target_id, assigned_by (FK→admin_users), assigned_at, removed_at

learner_content_access — id, learner_id, content_id, content_type, tenant_id, source_assignment_id (FK→content_assignments), granted_at, revoked_at

certificates — id, learner_id, content_id, content_type (COURSE only V1), tenant_id, learner_name, content_title, tenant_name, certificate_number (KSS-{tenant_short}-{YYYYMMDD}-{seq}), issued_at

client_audit_log — id, tenant_id, actor_id, actor_name, actor_role (CLIENT_ADMIN|CONTENT_CREATOR), action, entity_type, entity_id, before_state (JSONB), after_state (JSONB), ip_address, created_at

5.3 V2 Tables (not built in V1)

Groups, LearnerGroupMembership, LearningPath, LearningPathStep, LearnerPathEnrollment, LearnerStepProgress

---

6. Technical Considerations

Tenancy Scoping

All CA queries inject `tenant_id` from URL slug. No JWT in V1 demo. Production = middleware JWT enforcement.

Slug → Tenant ID map (locked):

- `akash` → `ec1bc005-e76d-4208-ab0f-abe0d316e260`
- `techcorp` → `7caa0566-e31a-41b6-962d-30fb3d6cb011`

Dynamic Content Access

On content assignment to a target: system creates `learner_content_access` for all current target members.
On new learner added to target: system checks all active `content_assignments` for that target and creates access records.
On learner removed from target: `learner_content_access.revoked_at = NOW()` (unless covered by another assignment).

Certificate Number Generation

Format: `KSS-{tenant_short}-{YYYYMMDD}-{seq}`
tenant_short: first 3 chars of tenant name uppercased. Akash → AKS, TechCorp → TCH.
seq: sequential integer within (tenant_id, date) scope, zero-padded to 3 digits.

---

7. Success Metrics (V1)

Metric	Target
CA can onboard 100 learners via CSV	< 5 minutes end-to-end
CA can assign content to a department	< 60 seconds
Dynamic access visible to learner after dept assignment	< 5 seconds
Audit log completeness	100% of state-changing actions logged
Zero cross-tenant data leaks	0 incidents

End of Client Admin Master PRD — v2.0 (V1 scope locked March 20, 2026)
